TimeMessenger®

ABOUT THE SERVICE

Messages that arrive on the right day

TimeMessenger delivers a letter, photos or a video on the day you choose. Tomorrow, next year or thirty years from now. The content is encrypted on your own device.

HOW IT WORKS

Three steps, nothing to install

Everything runs in the browser, on a computer or a phone. No account needed.

1. **Write a capsule**
   Text, photos, video or other files. One capsule can go to up to ten email addresses.

2. **Pick the delivery day**
   A specific date and time, such as a birthday, graduation or anniversary. Until then the encrypted capsule waits with us.

3. **The recipient gets a link**
   On the day, an email arrives, and an SMS too if you like. The capsule opens in the browser and can be downloaded.

What people send

A letter to yourself

Where I want to be in ten years, what worries me today and what makes me happy.

Wishes for later

For a child's eighteenth birthday, a wedding, the birth of a grandchild.

A memory of today

Photos and video that arrive at a reunion, an anniversary or out of the blue.

Why it works

Words written today carry a different weight years later. TimeMessenger keeps track of the date, so neither you nor your loved ones have to.

WHO IT IS FOR

For people, schools and hospices

One service, three uses.

Individuals

Write a capsule yourself in a few minutes, with or without an account.

- One free text message every day
- Attachments are priced by size and storage time
- Delivery by email, optionally by SMS

Schools

Pupils write a letter to their future selves or record a class video. We deliver it in 5, 10, 20 or 30 years, right in time for the reunion.

- Monthly subscription, no commitment, 300 capsules and 60 GB of attachments a month
- Pay by card or by invoice
- Ready-made documents for parents

Hospices

With help from staff or volunteers, a patient can write a letter or record a video for their family. It arrives on a birthday, a wedding day or an anniversary.

- Same subscription and limits as for schools
- Works at the bedside from a phone or tablet
- Capsules sent before cancelling are always delivered

SECURITY

What we can see, and what we can't

Text and attachments are encrypted (AES-256) right in your browser. Whoever writes the capsule decides how it will be opened.

With a password

The capsule key is protected by a password only you and the recipient know. Not even we can read the content. A forgotten password cannot be recovered.

Link only

Without a password, anyone who has the link can open the capsule. The part of the link that unlocks it is stored encrypted with us so we can send it on the delivery day. The author has to confirm this choice explicitly.

- The server only sees what delivery needs: the recipient's address, the date and file sizes
- Once the chosen period after delivery ends (one week to one year), we delete the capsule
- We never sell personal data or share it for advertising

Pricing

Current prices for individuals are at timemessenger.eu/ceny. We put together subscriptions for schools and hospices individually: just write to us.

Contact

We are happy to give a demo, answer questions or prepare an offer for your organisation.
